Over 170 Groups Urge Bill Conferees to Include 'Double Duty' Public Health Funds in Stimulus for Jobs and Health Care Savings

Published on http://www.earthtimes.org
February 10, 2009

More than 170 public health organizations issued a letter today to Congressional Conferees urging them to maintain the House-passed level of funding for prevention and wellness programs in the American Reinvestment and Recovery Act of 2009. The final U.S. Senate version of the bill removed all funding for these programs.

The funding in the House stimulus could directly save or create more than 20,000 public health jobs. As states, local governments, and communities are hit with economic hard times, they have already laid off more than 11,000 public health workers and left over 10,000 jobs vacant, and at least as many layoffs are expected in the coming year. In addition, by funding the expansion of targeted, effective community-based disease prevention programs, additional new jobs will be created directly in the communities they are serving. The funding would support existing programs, where mechanisms are in place to get the money out quickly so it can have an immediate impact on the economy.

"Thousands of public health jobs hang in the balance," said Jeff Levi, Ph.D., Executive Director of Trust for America's Health (TFAH). "These public health workers are the ones we rely on to hold the community health safety net in place as the number of unemployed, uninsured, and underinsured Americans is growing by the day."

"We should also remember that the funding for public health goes way beyond protecting and creating jobs. It's also a down payment toward reducing health care costs over the long term, keeping Americans healthier and more productive. Containing health care costs is one of the most important factors for improving the U.S. economy. Supporting prevention and wellness is one of the smartest investments we could be making, and we hope Congress will do the right thing and maintain this funding in the final bill," Levi continued.

The full text of the letter supported by more than 174 public health groups is below:

February 10, 2009

Dear Conferee:

Our 174 organizations express our gratitude and support for the robust public health provisions included in the House-passed version of the American Recovery and Reinvestment Act of 2009, and our extreme disappointment over the $5.8 billion in prevention and wellness funding stripped from the Senate bill. We urge you to maintain the House-passed level of $3 billion for prevention and wellness in the final enacted version of the bill.

As you know, the public health system is experiencing severe workforce shortages. State and local health departments lost over 11,000 jobs last year. The Prevention and Wellness Fund included in the House bill would help to restore lost jobs and prevent a projected additional 10,000 job vacancies from occurring next year in health departments.
During an economic downturn, it is important to have a strong safety net to support individuals who are losing their health coverage. As unemployment rates soar, unemployed workers and their families turn to state and local health departments and community-based organizations for basic health services, like immunizations and preventive services that are provided free of charge to those who cannot afford them. Toward that end, we hope that you will consider an investment in wellness and prevention as a means of restoring and creating jobs, as well as offering assistance to struggling families.

The recovery and reinvestment legislation affords the opportunity to stimulate the economy and strengthen our investment in health infrastructure and workforce while building stronger, healthier communities. This investment can also help stave off the onset of many costly chronic diseases and avoid the need for treatment of expensive complications of disease. Controlling health care costs will be critical to getting the country's economy back on track. Fundamental health care reform, particularly reform that focuses on ways to keep Americans healthier, must be part of solving our current financial crisis. Funding for public health and disease prevention in the stimulus bill is a down payment toward reducing health care costs over the long term.

Our nation needs a healthy and productive population to meet the challenges of the future, and rebound from these difficult times. An investment in public health will put us on a preferred path of prevention and wellness. To prevent further job loss in state and local health departments, stimulate job creation in the health field, and fully capitalize on the opportunity to promote health, we ask that you include at least $3 billion for prevention and wellness in the final version of the American Recovery and Reinvestment Act.
